

PITCH DECK · AUGUST 2026 · OMO.SPACE

Buy the result, not another subscription.

Omo is a marketplace of small AI helpers. Every skill is **free to download** — you only pay when Omo **runs it for you**: cents per job, no monthly rent.

15 live listings

102 skills open source (MIT)

\$0.10–\$5 per run

\$100k/day north star

Issue #120 · founder-ready draft · every number sourced; placeholders marked · no fabrication

Software rents. Skills rot.

SUBSCRIPTION FATIGUE

Teachers, parents and small teams rent software at **\$15–\$30/month** to do one narrow job a few times a year. Our demand research (Reddit, 2026) is full of people who resent the meter running on tools they barely use.

SKILL SLOP

“There are **800,000+ SKILL.md files** on GitHub right now... Most are someone's personal config... A decent chunk are **AI-generated slop that was never tested**. Some are just broken YAML... and then there are the actually dangerous ones” — prompt injection, exfiltration, safety-ignore.

— u/BadMenFinance, r/AI_Agents, Apr 2026 · source: research/REDDIT-SKILL-SOURCING.MD

Nobody sells the finished job. You can rent the software, or you can download files that may or may not work. The result itself is never for sale.

THE INSIGHT

People don't want software. They want the thing it makes.

\$0.99

one printable decodable book, keep the PDF, no subscription

VS

\$29/month for a book-maker you rent forever

BUY THE RESULT

Flip the model: **pay per outcome, keep the outcome**. A book for \$0.99, an ad for \$0.10, a keepsake for \$0.40. The buyer's cost is a cent-scale event, not a monthly tax.

That's the one-line brand: **"Buy the result, not another subscription."** Everything visual and commercial follows from it. (source: research/BRAND-DNA.MD)

One-line brand verified in research/BRAND-DNA.MD · price evidence: site/catalog.js, marketing/oss-strategy.md

Every workflow shows two doors.

1 RUN IT FOR ME

Sign in, fill the form, Omo runs it in the cloud (Cloudflare Worker → Modal app). Pay **per run** from a wallet — \$0.10–\$5 — reserved **before** any provider spend; failure means **auto-refund**.

Stripe checkout · Neon ledger · idempotency keys · no double-charge

2 LET ME OWN IT

Every SKILL.md is **free to download** (MIT, github.com/omo-space/skills) — self-host it forever. One premium exception: the flagship book maker, sold as a \$400 license.

“The free file is the ad for the paid run.” — founder playbook

The two doors are separate: **owning** the workflow doesn't add run credits; **running** it doesn't buy the download. (current boundary: paid download fulfillment still coming next — [architecture.md](#))

A SKILL.md in. A built, tested, priced, hosted app out.

CAPABILITY RESOLVER

7 typed capabilities live in the registry, never matched by name or slug — a skill selects capabilities only through its reviewed contract. Missing capability = typed blocker, not a guess.

SEMANTIC GATES

Contract-derived evidence checks (quotes in source, arithmetic recomputes, spans verified). **70% hosting bar** — the rest fail closed as typed blockers with reason, evidence, resume point. Never a silent skip.

0/27 → 27/27. On the same 27 cases, fresh provider runs.

ROUND (2026-08-15)	SCHEMA	SEMANTIC	PROVIDER COST	VERDICT
Baseline (real provider)	0/27	0/27	—	every tool raised LLM_INVALID_OUTPUT
Gate 1R · response-format fix	27/27	18/27	\$0.00478	schema fixed by one provider-compat change
Gate 1R2 · normalizers	27/27	23/27	\$0.00492	digraph-spotter 0/3 → 3/3
Gate 1R3 · final semantic layer	25/27	25/27	\$0.00349	every tool ≥1 pass · 2 cases fail closed

27-case arc test spend ≈ **\$0.013** (<\$0.02)

Batch-30: **28/28** schema · **17/28** semantic · **7/30** hosted

23 typed blockers ranked, exact next capability each

credential-free ceiling **7/10 → 15/30** fixture-proven

foreign-skill hosting ≈ **75%** of intake*

Failures are **typed, ranked and published** (one-shot-rounds.md) — the honest measurement discipline is itself the moat.

Sources: research/one-shot-rounds.md (all arc numbers + costs) · GOAL.md (15/30 fixture-proven, issue #58) · *75% foreign-skill hosting & 7/10 per issue #120 brief

4,500 teachers already trust the founder.

4,500

PhonicsMaker teacher subscribers — the existing product (~\$5k MRR). The only meaningful distribution asset.

200

teacher GATE-1 cohort built (182 intent + 18 segment-fill). **Zero emails sent.** Pilot armed, not fired.

MAGIC-LINK GRANTS

One free \$0.99 book per teacher — HMAC-signed grant, 245/245 fixture tests, redemption fails closed. "Make one printable phonics book when you need it, pay \$0.99, keep it. No subscription."

CANARY GATES

10/10 unauthenticated live canary green; loader submit → HTTP 202 → completed ready (5/5 fixture checks, 0 provider calls). Payment loop live: real Stripe Checkout URL returned.

GATE 1 decides everything: **≥25% of free-book makers fund a second, paid book within 14 days.**

A \$0.10 run costs about a tenth of a cent.

LISTING	RUN PRICE	MEASURED COST	PROOF
9 phonics tools (deployed)	\$0.10	\$0.00007–0.00078	27–case acceptance ledger, per call
Japanese sumi–e video	\$0.10	\$0.00061 compute	real 10.000s 1080×1920 MP4, zero provider spend
Decodable Book Maker	\$0.99	~cents of LLM+PDF	byte–deterministic book_pdf renderer
Woven keepsake book	\$0.40	small	real 5–page signed PDF run
The loader (skill.md → app)	\$5.00	deterministic	guarded analysis floor · 5/5 fixture checks

WALLET BEFORE PROVIDER

Price reserved from the buyer's wallet **before** Omo spends; failed run = **auto–refund**, idempotency keyed. \$5 starter grant per new account. (architecture.md)

CREATOR ECONOMICS · 85/15

Makers keep **85%** of marketplace–found sales (95/5 creator–referred) + **20% of positive hosting margin**. Splits are public — “money in daylight.”

Real products. Real proofs. Zero fabricated claims.

9 phonics tools · \$0.10 each generated, registered, deployed, chargeable — accepted by the 27-case gate	The loader · \$5 skill.md → built/tested/priced workflow; canary completed ready, 0 provider calls
Woven keepsake · \$0.40 real WhatsApp-chat → 5-page signed keepsake PDF, visually verified	Customer-feedback · \$0.10 real comments → faithful themes; hosted preflight green
Japanese story video · \$0.10 real audio → sumi-e animation: 10.000s 1080×1920 MP4, 300 frames	Facebook Ads copy · \$0.10 verified facts → 3 launch-ready variants, provider-backed
Decodable Book Maker · \$0.99 real 4-page book ("Sam and the Cat"); byte-deterministic book_pdf renderer proven	Live payment loop real Stripe Checkout URL returned; wallet, refunds, ledger in place

The honest headline: **paid runs: 0 · signups: 0** — pre-launch by design. The pilot is the first revenue test. (marketing/GOAL.md metrics)

Everything free to download. Paid to run.

102

skills public on github.com/omo-space/skills — MIT, one folder per skill: SKILL.md + policy + LICENSE + manifest.

R4 auto-publish: every release lands in the repo, fail-closed, idempotent.

ONE EXCEPTION

The flagship book maker stays **private** (\$400 license) — mistakenly published once, removed, and **permanently excluded** from the R4 gate.

The free file is deliberately runnable-but-annoying-to-host. “Lots of people get fed up and just use the cloud version.”

Make things teachers want. Post them where teachers are.

WAVE 1 & 2 ASSETS

Nine-phonics-tools, subscriptions-vs-omo, woven-keepsake, skill-md-loader — flat-vector cards in the **9-style system**: cream canvas, pine frame, one orange accent, Fraunces + DM Sans, the -7° bean.

MOTION

Vector-motion loops (mascot-wave, book-maker-pop, tagline-loop) and **ascii-motion** brand films (wordmark, particles, audio-reactive) — all rendered locally.

CHANNELS

X / Instagram / Facebook presets ready in the social-post skill. X launch paused at the phone/SMS gate — a founder step. FB group “Omo Space Community” queued as the teacher word-of-mouth hub.

WHY TEACHERS

Teachers are the **highest word-of-mouth vertical**: one classroom win spreads to a staff room, a district, a Facebook group of thousands.

30,000 good skills → 100,000 runs a day → \$100k/day

NOW · GATE 1

Prove a teacher pays twice: 200-cohort pilot, magic-link grants, ≥25% second-book rate. Then \$1k/mo → \$10k/mo → scale.

Honest path: marketing/GOAL.md

SCALE IS THE MOAT

30,000 crawlable skill folders × SEO-friendly names = a long-tail search library (“phonics worksheet generator”, “decodable sentence creator”...) no competitor will out-SEO.

100K-TOOL ARCHITECTURE

Registry-first: a tool is a versioned record, not a deployment. One runner per runtime family. Never 100k Modal apps.

THE TEAM

Founder, tech partner, and a machine that builds.

H

Harry
Founder

Built PhonicsMaker: **4,500 teachers**, ~\$5k MRR. Runs the growth loop himself: “I go to the communities, and build free skills for people then post it.”

K

Kaviru
Tech partner · “the problem-solving architect”

Ranked **#1 of 150** engineering candidates; ships product, integrations and deployment end to end.

⚙️

The agent machine
the builder profile

One-shot builder loop with gates, typed blockers, published evidence. Founder-desk holds: search key, safe-exec, image-gen approvals.

Sources: research/kaviru-chat/harry-digest.md (ranking) · marketing/GOAL.md · oss-strategy.md (loop quote) · credential-strategy.md (holds)

THE ASK

We're raising [amount] to [purpose].

AMOUNT

[\$ ____] — raise size · runway

PURPOSE

[____] — what it buys, over what horizon

What the money provably unlocks, from the verified roadmap: complete **GATE 1** (the 200-teacher pilot → paid second books), clear the **three founder-desk holds** (search backend · safe-execution · image generation) that unblock 23 ranked typed blockers, and fund the path toward the **30,000-skill library**.

The ask fields above are placeholders — fill in amount + purpose before this deck leaves the building. No numbers in this deck are fabricated; every figure traces to a source.
